

# Eltete

**A self-adhesive  
edgeboard which stays  
automatically in position!**

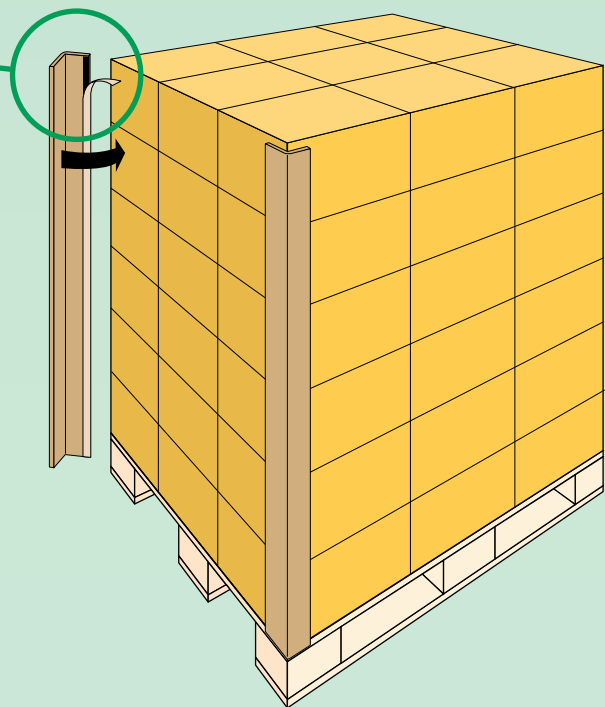

# ADD& STICK

Eltete **ADD&STICK** corner protection is an entirely new and patented packaging solution from Eltete. **ADD&STICK** helps you to provide effective protection for your products.

The glue is spread along the edge of the corner protector, either in drops or as a continuous strip. The glue strip is protected by a tape which it is easy to remove. This keeps the glue surface clean and allows the protector to stick firmly to the material of the surface to be packed.

The strongest adhesive bond can be achieved against wood, paper and plastic surfaces. Eltete add&stick is faster and easier to apply than conventional solutions. Make your packaging easier by choosing **ADD&STICK!**

Developed according to the requirements of experts in the packaging industry, Eltete **ADD&STICK** has numerous additional features:

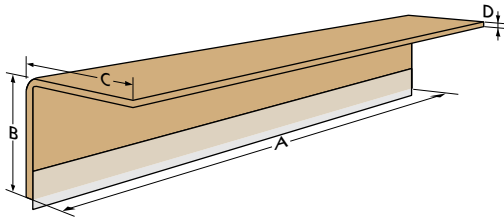

- Fast to apply
- Easy to handle
- The protective strip can be torn off manually with gloves on, due to an easy-to-grip tag.
- Different varieties of glue available to suit the underlying material
- Special low temperature glue also available
- Suitable for automated packaging lines
- Recyclable

Eltete **ADD&STICK** is available in all Eltete standard sizes and qualities (Edge boards, Palletcorners, Wrap around-Edgeboards, Edge-protectors).
